PROFESSIONAL SUMMARY

Computer Science undergraduate with a strong foundation in Python and Machine Learning. Experienced in building Deep Learning models using PyTorch, including Transformer-based NLP systems and CNN-based computer vision applications. Familiar with model deployment using Docker and CI/CD pipelines (GitHub Actions), with a strong interest in developing AI-driven solutions for real-world problems.

EDUCATION

B.E., Computer Science and Engineering | Neil Gogte Institute of Technology | 2023 – 2027
CGPA: 8.60 | **Relevant Coursework:** Database Management Systems, Computer Networks, Docker & Containerization
Intermediate (IPE) | Sri Chaitanya Junior Kalasala | 2021 – 2023 | Marks: 929

TECHNICAL SKILLS

Languages: Python, Java, SQL
Machine Learning & AI: Deep Learning, CNNs, Transformer Models, Natural Language Processing (NLP)
Technologies: PyTorch, MERN Stack
DevOps & Tools: Git, Github, Docker, Github Actions (CI/CD)

PROJECTS

Transformer-based Legal Document Summarization for Indian Court Judgments | *PyTorch, BART*

- Fine-tuned a BART-based Transformer model on 2,000+ Indian legal judgment-summary pairs to generate abstractive summaries, achieving ROUGE-1: 0.477 and BERT F1: 0.845.
- Built an NLP pipeline including text preprocessing, tokenization, and document chunking (1024 tokens) to handle long legal documents and improve model performance.
- Integrated the trained model into a web-based application enabling users to upload legal documents and generate readable summaries in under 60 seconds, improving accessibility of complex legal texts.

CNN-based Lake Water Quality Estimation using Satellite Images | *PyTorch, CNN, MERN Stack*

- Designed and trained a Convolutional Neural Network (CNN) model to classify lake water quality from satellite imagery, achieving 95% classification accuracy.
- Executed end-to-end data preprocessing and feature extraction on remote sensing datasets, optimized CNN architecture for reliable environmental monitoring.
- Developed a web-based interface using MERN stack to visualize and interact with model predictions for environmental monitoring.

MNIST Handwritten Digit Recognition with Docker & CI/CD | *Python, PyTorch, Docker*

- Built a neural network model from scratch in Python achieving 97.6% accuracy for handwritten digit classification using the MNIST dataset.
- Containerized the application using Docker and implemented a CI/CD pipeline with GitHub Actions to automate testing and build processes.

CERTIFICATIONS

IIT Kanpur Certificate Program on Python for AI/ML/DL | *IIT Kanpur, 2024*

- Completed intensive training on Python for Artificial Intelligence, Machine Learning, and Deep Learning, organized by the Department of Electrical Engineering.

Deloitte Australia Technology Job Simulation | *Forage, 2025*

- Completed a virtual job simulation involving data processing and software development tasks, gaining exposure to technology consulting workflows and problem-solving approaches.
